

## CARE & MAINTENANCE GUIDE

# Protect your investment

How to clean, protect, and maintain your mirrors for years of reliable use

### STAINLESS STEEL CLEANING AND MAINTENANCE

- Clean with a mild soap and water solution or a high quality stainless steel cleaner using a soft cloth.
- Always wipe in the direction of the stainless steel grain.
- Rinse off all soap or cleaner with a damp cloth, then wipe dry using a clean cloth.
- Never use cleaning products or polishes containing bleach, hydrochloric acid, chlorides, or silicone.
- Avoid abrasive cleaners or scouring pads.
- To remove dust, use a soft cloth or feather duster.

### MIRROR CLEANING AND MAINTENANCE

- Clean using a damp, soft cloth with a mild soap and water solution.
- Avoid products containing ammonia, vinegar, acids, or alkalis, as these can damage the mirror and its backing.
- Apply water or cleaning solution to your cloth, not directly to the mirror. Wring out the cloth to avoid excess moisture.
- Rinse off all soap or cleaning solution with a clean, damp cloth.
- After cleaning, dry immediately with a soft, lint-free cloth, ensuring all joints and edges are completely dry.
- Never use abrasive cleaners or solvents, as these can compromise the mirror's backing and edges.
- For stubborn watermarks or deposits, consult a professional rather than using abrasive methods.
